The use of HTML, CSS, JS, Github, and other technologies learned in this class for innovation in Library and Information Services is a great skill to acquire. One reason for this would be for when you are working in the Ottawa Public Library and the website needs to be updated for some reason. This could apply to websites for other libraries too, such as the MacOdrum Library, or the Audio-Visual Resource Centre at Carleton University, even the Morriset Library at the University of Ottawa.

HTML gives a website a basic layout, CSS gives colour and light to websites, JavaScript allows animation in websites, and Github allows you to make your own websites for free. By using Github, you would not need to pay other website makers to have the website be online. Those who work in Information Technology need to be experts at coding. Library Technicians, however, would use coding as something that is good to have, and not necessarily something that they need for everyday tasks. It is still useful either way.
